

REGION 2—GENESEE

Kevin C. Griffith

61 Grandview Lane, Rochester, NY 14612
ckgrif@frontiernet.net

It turned out to be a pretty good September. The average temperature of 61.9° F was 0.7° above normal. It was the ninth month in a row with above average temperatures. There were more days with below average temps than above average, but early in the month we experienced well above normal temperatures, with a 90° reading on the first. A near record temperature was also reached on the 24th. Possible sunshine was 10% below normal at 47%. Precipitation was only 0.09" below normal at 3.36". The Region experienced some soaking rains during some periods of the month. October was rather quiet and uneventful as far as the weather was concerned. The average temperature of 50.7° was a scant 0.3° above normal. It was the tenth consecutive month with above average temperatures. It actually was cool early in the month, and that was followed by a warm up from the 23rd to the 28th. Precipitation measured 3.30", 0.70" above normal. Yet, there were no heavy rains and precipitation seemed to be well spaced throughout the month. There were a few snowflakes on the 22nd and 31st but nothing that was measurable. Possible sunshine was at 46% compared to the normal 50%. Mostly sunny and mostly cloudy days were pretty well evenly split. November was pretty quiet weather wise. The National Weather Service described it as tranquil and uneventful. Both temperature and precipitation were about normal. The average temperature was 39.9°, right at the normal reading. Precipitation was only 0.17" below normal at 3.01". There was only 0.4" of snowfall. Possible sunshine was up 11% from the norm at 40%.

For the most part it was a rather benign season in terms of meteorological events affecting the birding. High pressure lingered early, and Hurricane Earl passed by us to the east. October saw the first decent frontal system, and with it there were lots of birds around. There were good numbers of Winter Wrens, kinglets, thrushes, and grassland birds by early October. The banding totals at Braddock Bay Bird Observatory were quite good for these groups of birds. The next frontal system cleaned things out and birds were relatively scarce for a while, but a system in late October brought with it the first Cave Swallows of the year and small numbers of several winter finches into early November. In late November another weak system brought the arrival of the bulk of the Cave Swallows and an increase in waterfowl numbers, primarily in those species that often winter on the lake. The food crop was good, with fruit locally plentiful and good seed crops in the fields. Cones were poor, not boding well for keeping any winter finches around long. Some of the fruit was consumed early and certain fields hosted good numbers of sparrows eating the seeds.

Waterfowl again were poor. This trend has continued and may be reaching a low. Goose numbers continued low with the exception of Cackling Goose, which continues to be reported in good numbers since the split, likely primarily

due to more interest now that they are a separate species. Both puddle and diving duck numbers were low. Canvasback numbers were very low. King Eider was the only real highlight. Loon numbers were low compared with recent years. This was also true for Horned Grebe. Red-necked Grebes were found throughout the season. There were no Northern Gannet reports this season. Records of note among the waders included late Great Egret and Cattle Egrets in late October and November, a continuing trend in recent years.

Black Vultures continue to expand, with another increase in reports. Red-shouldered Hawks were found throughout the season in expected locations. Rough-legged Hawk numbers built from October to November then dropped off slightly towards the end of the season. Sandhill Cranes continued through the season, with reports from just outside the Region near Savannah and of two birds near Taylor Marsh in the Town of Richmond, Ontario County.

Shorebird habitat was limited, but most expected species were reported. The late sightings in East Barre on 2 November by Dave Tetlow were interesting. There were few gull observations of special interest, but a few kittiwakes were noted and rarer reports included Sabine's, Black-headed, Franklin's, and Thayer's Gulls. A Regional high count of **five** Sabine's Gulls was reported by Dave Tetlow on 15 September. Tern counts were generally poor. Jaegers were well reported from Hamlin Beach and other locations along the lakefront this season. Long-tailed Jaeger reports continued a trend of nearly annual reporting in the Region going back to our first efforts at intense searching in late summer starting in the late 1990s.

The Eurasian Collared-Dove population continued to grow with up to nine being sighted in a single day. This included the group of six consisting of two adults and four juveniles, suggesting that we likely had the first breeding of the species in this Region this summer. Common Nighthawk counts continued very low, but a late Whip-poor-will was a good find for this season. The Chimney Swift maximum at our major fall gathering spot in Greigsville, Town of York, was down from recent years.

There were a number of immature White-eyed Vireo sightings, with a November bird the second latest report for the Region. Philadelphia Vireo numbers were good. Swallow maxima were generally low.

The Cave Swallow flight was very interesting this fall. There were several reports, in common with many reports in the Northeast following a major frontal passage from the southwest in late October. Then beginning on 23 November Dave Tetlow picked up another movement, seen by a few others that day, culminating in his counting well over 100 birds in the late afternoon, with many going to roost under bridges along the Lake Ontario Parkway west of Rochester. Dave organized a watch at these sites starting predawn the next morning, and 39 birds were tallied at or leaving these roosts. A couple of days later he located 16 birds that remained at a waste water treatment plant just inland from the Parkway in the Town of Parma, Monroe County until perishing in the cold and snows of early December. Prior to this incursion, 24 November was the late date for the species in this Region.

Winter Wren numbers were good, as were the numbers of kinglets and thrushes. Two Bicknell's Thrush were banded at BBBO. There were some good concentrations of Gray-cheeked, Swainson's and Hermit Thrushes counted at Hamlin Beach and banded at Manitou. A few Bohemian Waxwings showed up with the passing Cedar Waxwings in November, providing another highlight.

It was a mixed bag for warblers. Overall totals are well below historical numbers, but we continue to record good variety. There were multiple Orange-crowned reports. Also on the plus side were Magnolia, Black-throated Blue, Yellow-rumped, Bay-breasted, and Blackpoll warblers and Am. Redstart. Golden-winged Warbler went unreported, but this is not really a surprise due to its general population decrease. Four Connecticut Warbler reports were a highlight, with a bird found by Kim Hartquist in Highland Park, Rochester, on 16 October, record-late.

Sparrow reports varied widely across species.. There were some excellent concentrations of sparrows in October in a field in Parma. This area is a new addition to the Braddock Bay Fish and Wildlife Management Area. It hosted large numbers of individuals and thirteen total species of sparrows, including Nelson's Sparrow. There were two other reports of Nelson's during the season. Fox Sparrow numbers were also very good. Banding totals for White-throated Sparrow were excellent in October, but the numbers dropped rapidly later in the season. White-crowned Sparrow numbers were a bit lower than usual. There were two Dickcissel reports for the season, a typical number. Learning the distinctive call note is a huge aid to detecting this species. Most of the reports in the Region are of birds flying over calling.

The blackbird flight witnessed in Savannah at Marten Tract by the NYSOA Young Birder's Club in October was spectacular, with a continuous stream of birds for a significant amount of time. A record late Bobolink was found by Dave Tetlow in a newly preserved field in Parma.

Winter Finches put in an appearance during the season, with Pine Grosbeak, both crossbills, Common Redpoll, and Evening Grosbeak all reported in small numbers. Purple Finch numbers were low.

I saved the rarities for last. The bird of the season was a **Lewis's Woodpecker** in the Town of Richmond, Ontario County, a first Regional record and only the fifth State record. Many saw this cooperative bird. Not far behind in rarity was a **Gray Kingbird**, the third Regional record, discovered in the Town of Savannah by Dominic Sherony and seen by many. Dave Tetlow's Boreal Chickadee at Hamlin Beach on 23 October was the first in the Region in a number of years. It occurred as part of a big movement of Black-capped Chickadees which saw over 1000 banded at the Kaiser-Manitou banding station over only a few days around this date.

September's species total reached 213. This was nearly 10 species above the 10-year average. October topped out at 205 species, far eclipsing the 10-year average of 186.4. November totaled 146 species, 6.8 species above the 10-year average. Species for the year was almost identical to the 10-year average at 291.

PIGEONS – WOODPECKERS

Eurasian Collared-Dove: 1-9 all season P, H; 6 (2ad, 4 yg) H 14 Oct (AGu); max 9 P 22 Nov (DT).

Yellow-billed Cuckoo: last 2 W 10 Oct.

Short-eared Owl: arr 1 H 12 Oct.

N. Saw-whet Owl: last 1 DE 14 Nov (GC).

Com. Nighthawk: max 16 R 7 Sep (DP).

Whip-poor-will: 1b M 10 Sep, rarerly reported in fall migration.

Chimney Swift: max 450 GR 10 Sep (JK); last 17 GR 8 Oct.

Ruby-throated Hummingbird: last 1 M 5 Oct.

LEWIS'S WOODPECKER: 1 ad 30 OCT thru T Richmond, ONTA (mob), first Reg record.

FLYCATCHERS – WAXWINGS

Olive-sided Flycatcher: arr 1 G 9 Sep.

E. Wood-Pewee: last 1 WAYN 6 Oct.

Yellow-bellied Flycatcher: last 1b M 20 Sep.

Acadian Flycatcher: last 1b M 8 Sep.

Willow Flycatcher: last 1 G 12 Sep.

Least Flycatcher: last 1 HB 23 Sep.

empidonax species: last 1 R 1 Oct.

Great Crested Flycatcher: last 1 OC14 Sep.

E. Kingbird: last 1 Port Gibson, ONTA 5 Sep.

GRAY KINGBIRD: 1 S 23 Oct (DS), 3rd Reg record.

N. Shrike: arr 1 M 8 Oct.

White-eyed Vireo: 1 imm BA 15 Sep (SD, JP); 1 HB 16 Sep (R&SS); 1b M 10 Nov (BBB), 2nd latest Reg.

Yellow-throated Vireo: last 1 OC 17 Sep.

Blue-headed Vireo: last 1 R 17 Oct.

Warbling Vireo: last 1 BB 2 Oct.

Philadelphia Vireo: last 1b M 26 Sep.

Red-eyed Vireo: 83b M 11l Sep; last 1 M 17 Oct.

Horned Lark: max 65 K 21 Nov.

Purple Martin: last 10 S 11 Sep.

Tree Swallow: max 800 S 2 Oct.

N. Rough-winged Swallow: last 5 S 19 Oct.

Bank Swallow: last 1 M 3 Oct.

Cliff Swallow: last 1 S 2 Oct.

CAVE SWALLOW: arr 1 HB 23 Oct (DT); 1 HB 27 Oct (AGu); 35 HB 23 Nov (DT); 35 G 23 Nov (GL); 1 H 23 Nov (AGu); 111 K 23 Nov (DT), going west; 30 K 23 Nov (DT), later going east; 110 K-BB 23 Nov (DT) roosting under bridges; 39 K-BB 24 Nov (mob); 3 M 25 Nov (DT) heading west; 1 BB 25 Nov (DT), roosting under a bridge; 16 P 25 Nov thru (DT), at waste treatment plant; *see note, this issue*.

Black-capped Chickadee: max 410b M 20 Oct (BBBO).

BOREAL CHICKADEE: arr1 HB 23 Oct (DT).

House Wren: last 1 S 5 Oct.

Winter Wren: arr 2 M, S 11 Sep, 32b M 11-30 Sep; max 43b M 12 Oct.

Sedge Wren: last 1 HP 12-13 Oct (KG, GL).

Golden-crowned Kinglet: max 45b M 12 Oct.

Ruby-crowned Kinglet: arr 4b M 11 Sep; max 54b M 2 Oct; last 2 G 21 Nov.

Blue-gray Gnatcatcher: last 1 ICW 7 Sep.

Gray-cheeked Thrush: arr 1b M 7 Sep; max 26b M 23 Sep; last 1 HB 10 Oct.

BICKNELL'S THRUSH: 1b M 18 Sep; 1b M 10 Oct (BBO).

Swainson's Thrush: max 21b M 26 Sep; last 1b& 1 M & T Ontario, WAYN 6 Oct.

Hermit Thrush: arr 1 M 15 Sep; max 31 HB 12 Oct.

Wood Thrush: last 1 Chimney Bluffs, WAYN 9 Oct.

Am. Robin: max 5250 BR 12 Nov (DT); 1 HB 29 Nov (RS), albino.

Gray Catbird: total 3 sev 1-10 Nov.

Am. Pipit: max 400+ CU 23 Oct; last 1 HB 23 Nov.

Bohemian Waxwing: arr 1 HB 3 Nov (DT); 2 BR 12 Nov (DT); 1 W 15 Nov (GC); 75+ K 23 Nov (DT).

Cedar Waxwing: max 1590 BR 12 Nov (DT).

LONGSPURS – WARBLERS

Lapland Longspur: arr 1 HB 15 Sep.

Snow Bunting: arr 1 H 5 Oct; max 320 G 12 Nov.

Blue-winged Warbler: last 1 M 5 Sep.

“Brewster’s” Warbler: last 1b M 8 Sep.

Tennessee Warbler: last 1b M 7 Oct.

Orange-crowned Warbler: arr 1b M 21 Sep; 1 H 23 Sep; 2 P 13 Oct; 1 BB 18 Oct; 1b M 26 Oct.

Nashville Warbler: last 1 Northampton Park, MONR 30 Oct.

N. Parula: last 1 Stopover Transect 30 4 Oct.

Yellow Warbler: last 1 CL 23 Sep.

Chestnut-sided Warbler: last 2b M 23 Sep.

Magnolia Warbler: max 82b M 11 Sep; last 1 M 14 Oct.

Cape May Warbler: last 1 M 14 Oct.

Black-throated Blue Warbler: last 1 PI 26 Oct.

Black-throated Green Warbler: last 1 PE 7 Oct.

Blackburnian Warbler: last 1 ICW 21 Sep.

Prairie Warbler: last 1 M 23 Sep.

Palm Warbler: arr 1 M 9 Sep; last 1 S M 2 Oct..

Bay-breasted Warbler: last 1 OC 9 Oct.

Blackpoll Warbler: max 29b M 7 Oct; last 4 BB 17 Oct.

Black-and-white Warbler: last 1 Stopover Transect 117 4 Oct.

Am. Redstart: last 1b M 11 Oct.

Ovenbird: last 1 M 26 Sep.

N. Waterthrush: last 1 M 26 Sep.

Connecticut Warbler: 1b M 2 Sep (BBBO); 1 M 11 Sep (DT); 1 AT 16 Sep (SD); 1 R 16 Oct (KH), record late.

Mourning Warbler: last 1 M 22 Sep.

Hooded Warbler: last 1b M 25 Sep.

Wilson's Warbler: last 1b M 25 Sep.

Canada Warbler: last 1b M 11 Sep.

TANAGERS – WEAVERS

E. Towhee: last 1 HB 29 Nov.

Am. Tree Sparrow: arr 1 BB 2 Oct.

Vesper Sparrow: last 1 AL 16 Nov.

Savannah Sparrow: last 1 AL 16 Nov.

Nelson's Sparrow: arr 1 S 10 Oct (NC); 1 HP 12 Oct (KG, GL); 1 P 13 Oct (DT).

Fox Sparrow: arr 1b M 1 Oct; last 1 G 21 Nov.

Song Sparrow: max 638 P 13 Oct (DT).

Lincoln's Sparrow: last 1 M 14 Oct.

Swamp Sparrow: max 81 P 13 Oct (DT).

White-throated Sparrow: arr 1b M 10 Sep; max 175b M 1 Oct; total 1459b M 10 Sep-16 Nov.

White-crowned Sparrow: arr 2 PI 17 Sep.

Scarlet Tanager: last 1 R 3 Oct.

Rose-breasted Grosbeak: last 1 AT 7 Oct.

Indigo Bunting: last 1 CU 2 Oct.

Dickcissel: 1 H 26 Oct (AGu); 1 HB 3 Nov (DT).

Bobolink: last 1 P 3 Nov (DT), Reg record late.

Red-winged Blackbird: max **90,000** S 23 Oct (NYSOA YBC).

Eastern Meadowlark: last 1 H 13 Nov.

Rusty Blackbird: max 18 ICW 2 Nov (GL).

Com. Grackle: max **812,947** S 23 Oct (NYSOA YBC).

Brown-headed Blackbird: max 698 S 23 Oct (AB).

Baltimore Oriole: last 1 Mt. Morris, LIVI 2 Oct.

Pine Grosbeak: 1 G 9 Nov (DT), only report.

Red Crossbill: arr 1 BR 12 Nov (DT).

White-winged Crossbill: arr 2 M 8 Nov (DT).

Evening Grosbeak: arr 3 T Sodus, WAYN 30 Oct (JM).
